Maxthon, a software developer that specializes in state-of-the-art web browsers, has announced the launch of its new Maxthon for Mac browser (Beta). The company says this new version of its web browser marks an important step in Maxthon's plan to provide users with a seamless browsing experience across multiple platforms and devices.

The launch of Maxthon for Mac offers Mac users the same high-performance experience currently enjoyed by more than 100 million Maxthon users around the world – speed, built-in features and HTML5 friendliness that distinguish the Maxthon browser for Windows, Android, Kindle Fire, Nook iPad, and BlackBerry, and now for Mac.

"Maxthon for Mac is the first iteration of several offerings for Apple, to be followed by Maxthon for iPhone, which will lead to cross-platform syncing for PC, Android and Apple," says Jeff Chen, CEO of Maxthon. "With Maxthon for Mac, our users around the globe will no longer have to choose one competing brand of hardware or operating system over another."

Maxthon for Mac (Beta) includes the following features:

- Out-of-the-box Video Viewing for Macs Flash and other standards are pre-loaded
- Cloud-based, Cross-platform Syncing Syncs bookmarks between your Windows PC, Mac and iPad instantly
- Reader Mode Removes ads and presents multi-page articles in one window
- Private Browsing Mode Provides the ability at the tab level to browse the web without saving any browser history
- Smart Address Bar Combines the URL bar and search bar into one; presents search suggestions and safe sites
- Global Languages More than 40 languages
- Magic Fill Pre-fills usernames and passwords for favorite websites
- Privacy and Security Settings
- Automatic Updates

Maxthon 3 comes with a browser engine that the developers claim draws web pages 200% faster than Google Chrome, plus free cloud services that store your bookmarks and notes securely on the web for anytime, anywhere access, and lets you share screen grabs with the built-in Snap feature

System requirements:

Version 1.0.2.0 Beta [2012-07-30] supports Mac OS X 10.6 or later.

Freeware
