## Maxthon—Resource Sniffer

Maxthon may be the king of extra goodies, but it's also among the most new-standards-compliant and speediest browsers, so it's worth your checking out. A couple of favorite Maxthon tricks include Night Mode—which transforms an eye-straining white webpage into one with soothing dark hues, built in screen capture, downloading to cloud storage, and a “telestrator.” It's also the only browser that includes two page-rendering engines, the ones used by both Chrome and Internet Explorer, so you're unlikely to find a site that doesn't play well with it. I was spoiled for choice with this one, but I went with the little-known browser's Media Sniffer, which detects and lets you download any videos, photos, or music found on the webpage you're browsing.
